SunPods Selected to Compete at the Clean Energy Venture Summit

AUSTIN – October XX, 2009 – SunPods, Inc., a leading developer of transportable and modular plug-and-play solar power platforms,, is pleased to announce they have been selected to compete at the Clean Energy Venture Summit (CEVS) on Oct. 14 and 15 at the AT&T Conference Center. SunPods will be showcasing their SunPods Solar Smart Technology Systems™ on Oct. 15 at 9 a.m. CST.

With the price of solar photovoltaic modules dropping, solar array installation cost now represents a higher percentage of overall project cost and cost improvement is necessary. SunPods has answered this need with solar appliances that are pre-engineered, pre-manufactured, and pre-tested in a rigorous factory setting and delivered to projects assembled and ready to power up on arrival. SunPods transportable solar power platforms provide owners with efficient and reliable solar power performance that eliminates the cost, scheduling and performance uncertainties common with most current solar installation methods and systems.

About SunPods

Imagine placing a call and ordering a photovoltaic array system that is pre-manufactured and pre-tested. Now imagine it delivered to your site in just days – ready to power up instantly. SunPods is the developer and manufacturer of SunPods Solar Smart Technology Systems™. SunPods are the first factory built, ship to project, fully operational, modular solar power platforms. SunPods are transportable and power up on delivery. Once placed onsite, SunPods require only an electrical hookup from the inverter to the power panel to generate clean renewable energy. For more information, visit: <http://www.sunpods.com>

About the Clean Energy Venture Summit

The third annual Clean Energy Venture Summit (CEVS), “Bringing the Smart Grid to Life,” will bring together emerging clean energy technology companies, leading investors and a seven-member utility power panel on October 14 and 15. CEVS supports the Pecan Street Project, the most aggressive smart grid project in the nation. Distributed generation, renewable energy, demand management, transportation, storage and energy efficiency companies will compete for investor funding, attention from regional utilities and the title of “most promising early stage smart grid company.” Battery Ventures, Sevin Rosen Funds, DFJ Mercury, Applied Ventures, 21 Ventures, TXU Energy, Austin Energy, CenterPoint Energy, CPS Energy, Bluebonnet Electric and NREL are just some of this year’s participants. CEVS is the place to be for anyone serious about the smart grid. Learn more and register at <http://www.budurl.com/CEVS2009>

About Mercom Capital Group

Mercom Capital Group, LLC is a public relations, public affairs and market intelligence firm specializing in clean energy. At Mercom, we help clean energy companies build powerful relationships with media, analysts, government decision-makers and local communities. We arm our clients with timely market intelligence to ensure their competitive position and overall success. Mercom Capital Group is located in Austin Texas with offices in Bangalore India. For more information about Mercom Capital Group, visit: <http://www.mercomcapital.com>.
